

# Dog Poo Composting

## Description:

This dog poo composting facility works like a septic tank. Several feet under ground, the dog poo is safely and odorlessly processed by bacteria and enzymes. The result seeps into the ground and fertilizes the soil around it.

The Eco-Luxe solution is one in which you can purchase a ready-to-build compost-box from Doggie-Dooley. You may also hire someone to dig the 4-5ft hole. The DIY way consists of building the box and then digging the hole yourself (which, depending on the soil, takes 2-3 days). Here, we salvaged an old drawer and air vent flap to create the box, both are very easy to come by. Finally, we are cultivating our own enzymes and bacteria in petri dishes. You can however directly purchase the tablets from Doggie-Dooley.

## Budget:

Labor

**Total:**

## Eco-Luxe

\$450

5 hours

\$450 + 5 hours install

## DIY

\$82.20

10 hours

\$82.20 + 10 hours to build and install

## Why This Matters

There are more dogs than children in San Francisco, and dog waste is often considered cumbersome waste. This product provides a way to easily dispose of it and turn it into something useful: fertilizer!

## What Can I Do?

Install a dooley in your garden or at your local dog-park and put this waste to use!
